

Desert Cube Daily Cleaning Procedures **TROUGH URINALS**

In a desert environment saving water is easy if you know how. The Desert Cube Waterless urinal technology uses a series of microbial cubes that slowly dissolve over several weeks triggering the release of beneficial microbes. This results in a natural breakdown of organic matter inside the drain which interferes with the bacterial digestion that produces unpleasant odours.

Step 1

Wet the urinal with cold water using the watering can or hose provided.

Use 4 litres of water per 60cm of trough.

Step 2

Scrub the entire urinal surface with the brush provided or an optional long handle model. Pay special attention to the step in front of the urinal, below the front edge of the urinal and drain hole.

You must remove all marks and stains.

Step 3

Rinse again with cold water using the watering can or hose provided.

Use 4 litres of water per 60cm of trough. After rinsing, pour 8 litres of water directly into the drain.

Step 4

Spray down the whole area including floor and surrounding tiles with pre-diluted Desert Washroom Cleaner at the ratio of 10ml to 750ml of water. Do not rinse after spraying.

Place 1 cube for every 60cm of urinal trough. Place cubes at the back wall of all urinals. Only replace cubes once they have completely dissolved.

DO NOT: Use a mop or empty the mop bucket on the urinal.

DO NOT: Use any other chemicals in the urinal.

DO NOT: Use hot water on the urinal.

Desert Cube Daily Cleaning Procedures **PORCELAIN URINALS**

In a desert environment saving water is easy if you know how. The Desert Cube Waterless urinal technology uses a series of microbial cubes that slowly dissolve over several weeks triggering the release of beneficial microbes. This results in a natural breakdown of organic matter inside the drain which interferes with the bacterial digestion that produces unpleasant odours.

Wet the urinal with cold water using the watering can or hose provided.

Use 4 litres of water per porcelain urinal.

Scrub the entire urinal surface with the brush provided. Pay special attention to the tiles below the urinal, under the front edge of the urinal and drain hole.

You must remove all marks and stains.

Rinse again with cold water using the watering can or hose provided.

Use 4 litres of water per porcelain urinal.

Spray down the whole area including floor and surrounding tiles with pre-diluted Desert Washroom Cleaner at the ratio of 10ml to 750ml of water. Do not rinse after spraying.

Place 1 cube in each porcelain urinal. Place cubes at the back wall of the urinal. Only replace cubes once they have completely dissolved.

DO NOT: Use a mop or empty the mop bucket on the urinal.

DO NOT: Use any other chemicals in the urinal.

DO NOT: Use hot water on the urinal.
